# FLOWAIR R&D LAB

FLOWAIR - expert and manufacturer of HVAC equipment is a member of the EUROVENT Europe's Industry Association for Indoor Climate. This organisation brings together the largest companies in the industry, which jointly create new guidelines and recommendations that are eventually presented to the European Commission. The Association is looking for solutions related to energy savings inside buildings and the use of air curtains is one of recommended solutions.

The use of air curtains allows for thermal protection of the room. Curtains create an air barrier in the door opening and reduce heat losses / heat gains resulting from the inflow of cold air from outside in the winter, as well as inflow of warm air into the air-conditioned rooms during the summer. Presently, the regulations regarding energy losses when the doors are opened are not very clear.

A special project group at EUROVENT is currently developing a methodology for testing and describing air curtains in terms of their effectiveness to get a reliable comparison of their parameters. FLOWAIR - the only Polish producer participating in the project group has created a test stand to measure the effectiveness of air curtains. Based on the tests carried out and subsequent results, new tools will be created to simplify making informed investment decisions. Simply put, to help the end clients choose a proper solution.

## ADVANTAGES OF LABORATORY TESTING FOR THE CLIENT

At FLOWAIR, we constantly undertake activities aimed at increasing the quality of our products and services. A laboratory test is yet another step on the way to continuous product improvement and greater customer satisfaction.

Confirmed parameters

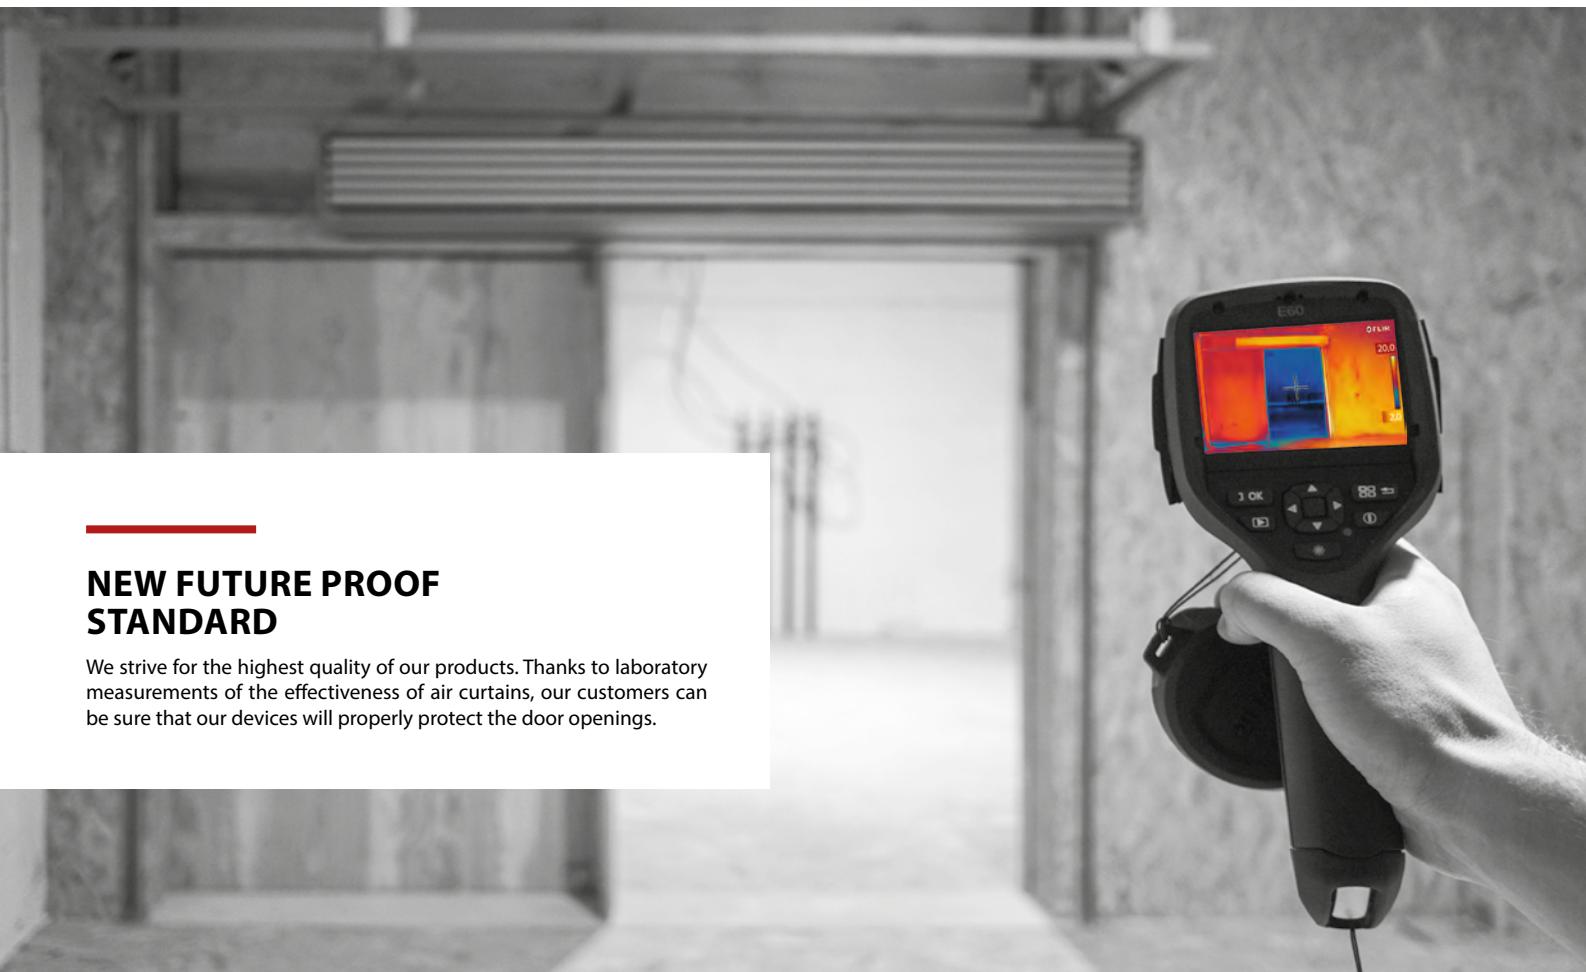

Reliable comparison

Energy -saving

Lower risk of investment

## NEW FUTURE PROOF STANDARD

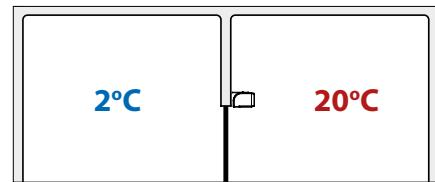

We strive for the highest quality of our products. Thanks to laboratory measurements of the effectiveness of air curtains, our customers can be sure that our devices will properly protect the door openings.

## TEST OF AIR CURTAIN EFFICIENCY IN RELATION TO TEMPERATURE DIFFERENCES

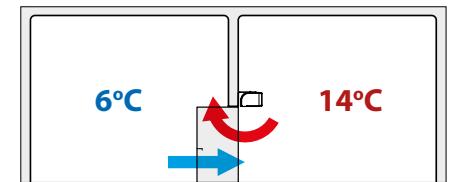

The test was carried out in the FLOWAIR R&D lab, in order to measure the effectiveness of the air barrier created by the air curtain relative to the temperature difference.

### TEST 1

Measurement of air temperature difference between the „cooling” and „heating” chambers upon opening the door - with curtain in Off mode. Chamber 1 simulates external conditions (air temperature is 2°C), and chamber 2 simulates conditions inside the building (air temperature is 20°C).

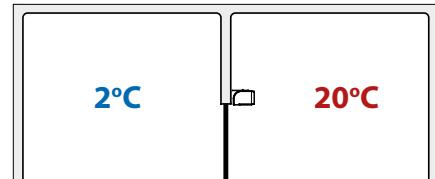

Simulation of external conditions - two closed chambers (cooling and heating).

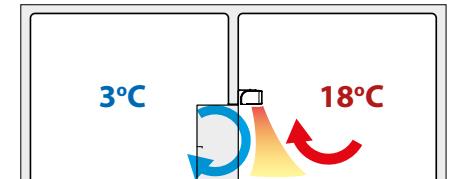

The door open for 60 seconds. Air temperature measurement with the curtain OFF.

### TEST 2

The second measurement is the air curtain effectiveness test – the air temperature difference between the „cooling” and „heating” chambers upon opening the door with the air curtain ON.

Simulation of external conditions - two closed chambers (cooling and heating).

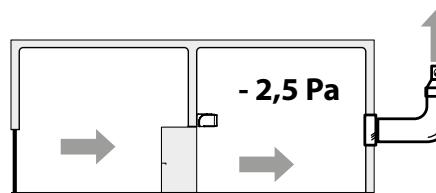

The door open for 60 seconds. Air temperature measurement with the curtain ON.

## TEST OF AIR CURTAIN EFFICIENCY IN RELATION TO AIRFLOW

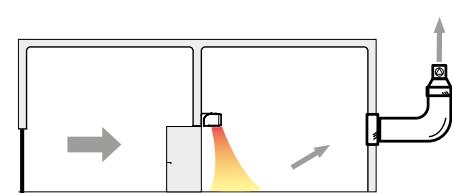

Testing the effectiveness of the air curtain in relation to the airflow (wind simulation) allows you to assess the airflow of the curtain.

### TEST 1

Stabilization of the vacuum pressure (-2.5 Pa) between the chambers and measurement of exhaust fan's efficiency with the door opened.

Stabilization of the vacuum pressure and efficiency of exhaust fan.

Measurement of the exhaust fan capacity with the air curtain ON.

## ISO STANDARD

The FLOWAIR door and gate curtain tests are carried out based on ISO standards, defining the aerodynamic properties of the air curtains (ISO 27327-1) and laboratory methods for testing the sound power level (ISO 27327-2). We take the requirements of the future ISO 27327-3 standard into account, specifying testing methods to determine the effectiveness of the air curtains.

# AIR CURTAIN Slim

 Range<sup>(1)</sup> [m] 3,2

 Heating capacity<sup>(2)</sup> [kW] 1,2–29,3

 Weight [kg] 14,7–26,9

 Casing Steel

 Airflow [m³/h] 750–3000

 2 colors as standard<sup>(3)</sup>  
**White with black elements and deep black**

SPECIAL PAINTING ON REQUEST

<sup>(1)</sup> according to ISO 27327-1

<sup>(2)</sup> Slim W power and temperature range specified for the parameters: fan speed III, heating medium temperature 40/30°C air temperature at the inlet to the device 20°C - fan speed III, heating medium temperature 110/90°C, air temperature at the inlet to the device 0°C; Slim E performance at power range: from 1N 230/50 to 3N 400/50

<sup>(3)</sup> RAL 9003 and 9005. Any RAL color upon request

## APPLICATION

The Slim curtain will work wherever doors are often opened, in shops, restaurants, service salons. Slim fits 99% of door openings. The curtain is designed for horizontal installation directly above the door opening and for vertical installation at the side parts of the opening.

## TECHNICAL DATA

# ADVANTAGES OF Slim AIR CURTAINS

4i Solution

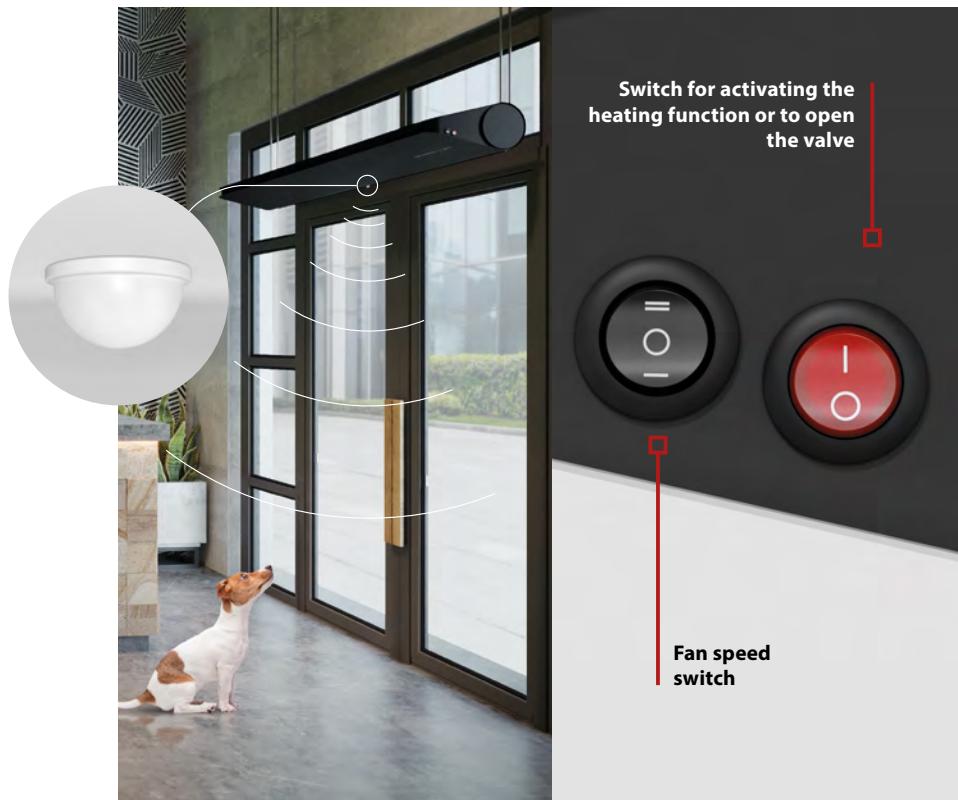

## I INTELLIGENT Intelligent savings

### Motion sensor

The built-in motion sensor activates the curtain when motion is detected in the vicinity of the device. No additional door sensor or other automation elements are needed. Additionally, you can limit or extend the sensor's area of operation yourself.

### Plug & Play

The Slim curtain has a built-in control for automatic operation in relation to the signal from the motion sensor. Thanks to this sensor, the device knows when to activate. Built-in switches on the side of the curtain allow you to adjust the air barrier to your needs.

## I IMPROVING AIR Air quality improvement

The design of the Slim air curtain allows for full protection against unwanted air inflow across the entire width of the door opening. The device is designed to work with an external filter module, which improves air quality and protects the device against the ingress of dirt and other pollutants.

Filter type: Coarse 30%  
Thickness: 4mm

## ■ INVISIBLE Discreetness in action

The Slim curtain has been designed to be unobtrusive. It works quietly even at top speed. It is aesthetic and thin - almost invisible.

Deep black

White with black elements

## ■ IDEAL Perfect fit for your business

The Slim curtain will be a perfect fit for spaces where the doors are often opened and closed, for example in shops, restaurants and other commercial facilities.

■ **99%**

Perfect fit for 99% of door openings.

■ **3,2 m**

The recommended installation height; up to 3,2 m is enough to secure the door openings in most commercial facilities.

■ **1 m = 100 cm**

The thinnest curtain on the market. The device doesn't have any protruding side details - its length is always as stated. 100 cm Slim air curtain = 1 m.

# AVAILABLE OPTIONS UPON REQUEST

## I TS + motion sensor

The solution will prove useful if you frequently change the curtain's settings and want to have the controller at your fingertips. Select the TS controller, which acts as a thermostat and switches on the heating elements.

## I TS + door sensor

This solution will prove useful when the motion sensor cannot operate freely due to some obstacles (e.g. a suspended element under the air curtain). In this case the devices' control depends on the signal from door sensor.

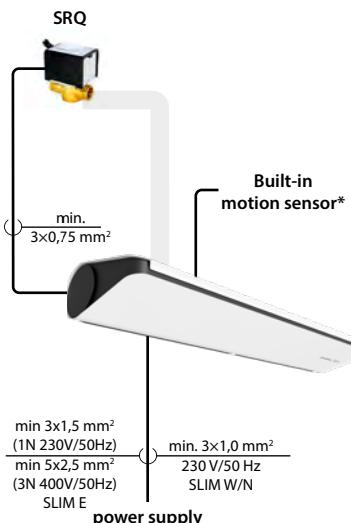

## I T-box

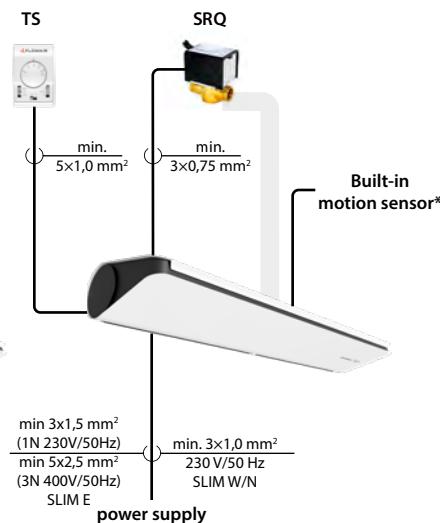

This solution will be useful when you want to connect the curtain to an intelligent building management system BMS. Choose this option if you need a weekly programmer or remote supervision over the operation of devices.

# CONNECTION DIAGRAMS

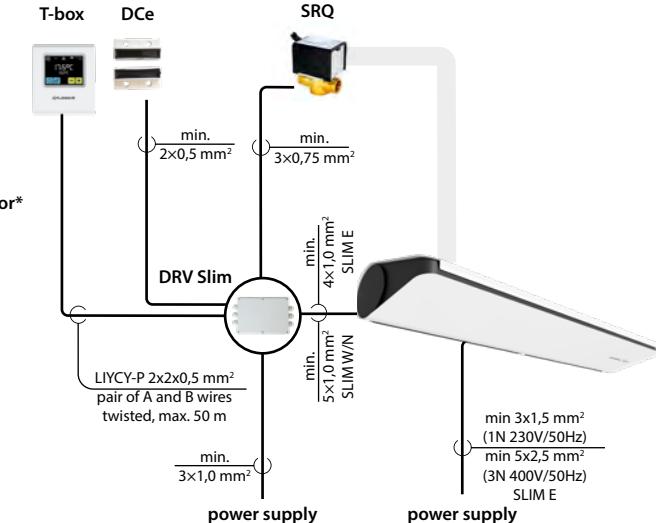

## I PLUG&PLAY CONTROL

## I TS CONTROLLER

## I T-BOX CONTROLLER

### ELEMENTS:

- **PLUG & PLAY** – Built-in motion sensor
- **SRQ** – valve with actuator (for SLIM W)

### ELEMENTS:

- **TS** – 3-step fan speed controller with thermostat
- **SRQ** – valve with actuator (for SLIM W)

### ELEMENTS:

- **T-box** – intelligent controller with touch screen
- **DRV Slim** – external control module
- **DCe** – magnetic door sensor
- **SRQ** – valve with actuator (for SLIM W)

\* here is an option to use DCe door sensor instead of built-in motion sensor

## AVAILABLE TYPES OF UNITS:

- **3 LENGTHS**  
1 m, 1,5 m or 2 m

- **3 VERSIONS**  
W – water heat exchanger (1- or 2-rows)  
N – without heating elements (“ambient”)  
E – electric heaters

## APPLICATION

Modern shape and small size makes it suitable to install the units both in representative and industrial buildings. ELiS T air curtains are designed for both horizontal mounting – directly above the door openings – and vertical mounting on the side parts of the door opening.

<sup>(3)</sup> RAL 9016

## APPLICATION

ELiS B air curtains are dedicated for shops, restaurants, exhibition rooms. Units are designed for installation in the ceilings. Advantage is the possibility to install in the existing ceiling without cutting additional holes.

## TECHNICAL DATA

### Air curtains

# INSTALLATION

## BRACKETS

Brackets with mounting holes for installation using threaded rods are included.

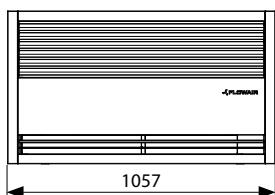

Installation of the unit doesn't require additional holes in the ceiling.

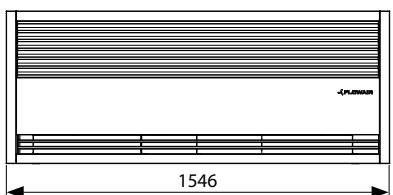

Access from the front makes installation, connection and cleaning of the air curtain much easier.

## AVAILABLE TYPES OF UNITS:

### ■ 3 LENGTHS

1 m, 1,5 m or 2 m

### ■ 3 VERSIONS

W – water heat exchanger  
N – without heating elements („ambient“)  
E – electric heaters

## APPLICATION

Representative rooms such as shops, restaurants, exhibition rooms, etc. ELiS A devices are designed for horizontal installation directly above door openings. They produce an air barrier that reduces heat/cool losses.

<sup>(2)</sup> DUO-W power and temperature range specified for the parameters: fan speed III, heating medium temperature 40/30°C air temperature at the inlet to the device 20°C - fan speed III, heating medium temperature 90/70°C air temperature at the inlet to the device 0°C; DUO-E power range for operation fan speed I - fan speed III

<sup>(3)</sup> RAL 9006 or RAL 9016

## APPLICATION

Device combines functionality of the air curtain and the fan heater. Modern design of the unit makes it especially suitable for buildings with high aesthetic values. Where there is a need of heating a room while providing an effective air barrier in the door opening, e.g. small grocery stores, petrol stations etc.

## AVAILABLE TYPES OF UNITS:

### ■ 3 LENGTHS

0,5 m, 1,5 m or 2 m

### ■ 3 VERSIONS

W – water heat exchanger (1- or 2-rows)

N – without heating elements („ambient”)

E – electric heaters

## APPLICATION

Warehouses, halls, logistics centers. ELiS G devices are intended for horizontal and vertical installation. They create an air barrier that reduces the various losses associated with the exchange of air between the room and the outside area.

<sup>(1)</sup> External control module DRV Slim required

<sup>(2)</sup> External control module DRV ELiS required

# CONTROL ELEMENTS

## DOOR SENSORS

Door sensors inform the control system about the opening / closing of the door.

Compatibility of sensors with ELiS air curtains

Sensor	Slim	ELiS T	ELiS B	ELiS A	ELiS DUO	ELiS G
DCet	✓	✓				
DCe			✓	✓	✓	
DCm		✓	✓	✓	✓	✓

## VALVES SRQ

Two or three-way valves with an electric actuator are available to control the flow of the heating medium.

Compatibility of valves with ELiS air curtains

Valve	Slim	ELiS T	ELiS B	ELiS A	ELiS DUO	ELiS G
SRQ2d 1/2"	✓	✓	✓	✓	✓	
SRQ2d 3/4"						✓
SRQ3d 1/2"	✓	✓	✓	✓	✓	
SRQ3d 3/4"						✓

## RX SPLITTERS

Control signal distributor for connecting several ELiS G air curtains with 3-stage fans to one controller.

The maximum number of devices supported by one controller

Splitter	Slim	ELiS T	ELiS G
1 pcs. RX	6 <sup>(1)</sup>	6	3
2 pcs. RX	12 <sup>(1)</sup>	12	6
3 pcs. RX	18 <sup>(1)</sup>	18	9

# INSTALLATION ELEMENTS

## CONSOLE ELiS

For horizontal mounting  
ELiS T, ELiS A, curtain  
heater ELiS DUO.  
Available in silver or  
white colours.

## MPK SET

for ELiS T

For vertical mounting  
ELiS T curtain. Available  
in silver color.

## BRACKETS Slim

For horizontal or vertical  
installation of the Slim  
air curtain. Available in  
white or black.

# SYSTEM FLOWAIR

mini BMS at your finger tips

## I INTEGRATION OF DEVICES

SYSTEM FLOWAIR is an intelligent solution which makes it possible to integrate the devices into a system with only one controller. T-box offers many necessary functions for effective management of a heating-ventilating system. These function were previously reserved for an extensive Building Management System (BMS).

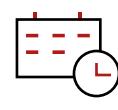

Control of devices with  
one T-box

Local regulation  
of devices

Advanced control of  
ventilating and heating  
devices

Control the devices  
according to your time  
schedule and individual  
needs

Antifreeze protects the  
devices against  
low temperatures

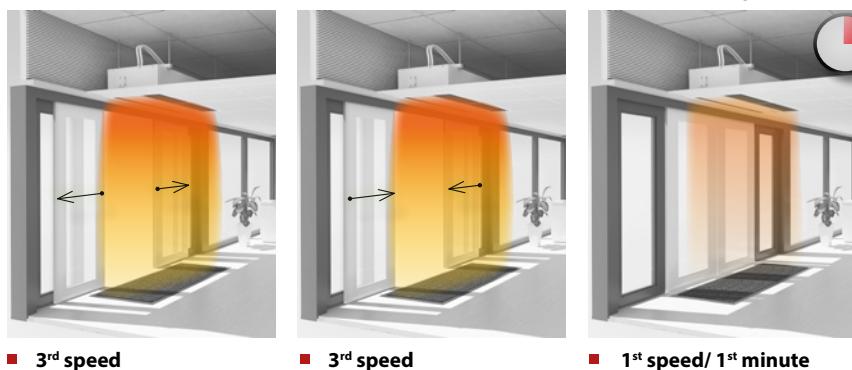

**LEO D BMS**  
destratificators

**ELiS and Slim**  
air curtains

**OXeN**  
ventilation unit with heat  
recovery

## | DELAY TIME AND IDLE SPEED

The function of the curtain off delay time allows the curtain to be automatically turned off after the set time has been counted down. The idle speed of the curtain allows the curtain to be set when the door is closed at reduced capacity for a pre-set time. After the set time has been deducted, the curtain is switched off.

### FIND OUT MORE!

Get to know SYSTEM FLOWAIR - check how the curtain delay time and idle speed works.
